Prabin Kumar Nayak

Frontend Developer | MCA Student (Batch of 2027)

8249292315 | prabinkumarnayak833@gmail.com | LinkedIn | GitHub

Professional Summary

MCA student (graduating 2027) seeking a Frontend Developer role. Built a responsive, animation-rich multi-page React application with Tailwind CSS, GSAP, and Vite, integrated with an Express.js REST endpoint through the Fetch API. Experienced in reusable React components, responsive layouts, accessibility basics, and turning designs into working interfaces.

Education

Master of Computer Applications (MCA), Sri Sri University 2025 – 2027
CGPA: 8.41/10

Bachelor of Computer Applications (BCA), F.M. University 2022 – 2025
CGPA: 8.14/10

Technical Skills

Languages: JavaScript (ES6+), HTML, CSS

Frontend: React, React Router, Tailwind CSS, Vite, GSAP (ScrollTrigger, SplitText), Lenis, Three.js / React Three Fiber, OGL (WebGL), Responsive Web Design, Figma (design-to-UI implementation)

Browser & API Integration: DOM, Fetch API, REST API integration, sessionStorage, Canvas, prefers-reduced-motion

Backend & Database: Node.js, Express.js, MongoDB, Mongoose, JWT, bcrypt, Multer, Cloudinary

Tools: Git, GitHub, npm, Vite, Nodemon, Prettier

Projects

ThePurpleCow – Responsive Agency Website *React, Vite, Tailwind CSS, GSAP, Express.js* Live Site | GitHub Repository

- Developed a responsive multi-page React 18 application with React Router (home, website development, and AI automation service pages) and reusable components, styled with Tailwind CSS v4 and built with Vite.
- Built a scroll-driven hero that draws a 111-frame WebP sequence on canvas, using a rolling `ImageBitmap` cache with capped concurrent loads and eviction, synchronized with GSAP ScrollTrigger and Lenis smooth scrolling.
- Implemented GSAP ScrollTrigger and SplitText animations with `gsap.context` cleanup, honored prefers-reduced-motion, and added WebGL background effects with React Three Fiber and OGL.
- Created a contact form with controlled inputs and loading/error states that submits JSON via the Fetch API to an Express.js `/api/contact` endpoint, which validates input and sends emails through the Resend API.
- Improved usability and accessibility with a responsive mobile navigation menu, accessible form labels, `aria-expanded` FAQ accordions, and scroll-position restoration using `sessionStorage`.

VideoTube Backend – REST API *Node.js, Express.js, MongoDB, Mongoose, Cloudinary* GitHub Repository

- Structured a modular Express.js backend (ES modules) with separate routes, controllers, models, middleware, and utilities, and versioned endpoints under `/api/v1`.
- Built a user registration endpoint with input and email validation, duplicate checks, and Multer/Cloudinary avatar and cover-image uploads; designed Mongoose schemas for users and videos.
- Implemented bcrypt password hashing and JWT access/refresh token generation methods in the user model (login flow in progress).
